

# no spares here

## **If a part fails out here, repairs are costly.**

Honeywell's Zing<sup>®</sup> Condition-Based Maintenance (CBM) solutions help prevent unplanned maintenance events. Zing<sup>®</sup> CBM monitors, records and reports aircraft component and operational parameters.

These data identify early stages of component degradation and advise the appropriate maintenance actions based on evidence-of-need.

Increasing aircraft availability.

Reducing maintenance costs.

Optimizing parts inventory management.

And most importantly – enhancing safety.

So your helicopter will be in the air – and not on the platform waiting for parts.

Fly with confidence. Honeywell Zing<sup>®</sup> CBM solutions.
