

Mission Ready

Honeywell International (NYSE: HON) is a \$34 billion dollar diversified global leader in defense technology and services. In 2007, the company's aerospace business reported strong growth that was largely driven from its expanding Defense Logistics and Services operations.

Today's aging fleets, frequent missions, and harsh environments create a complex support challenge, and Honeywell has responded. Acquisitions of Dimensions International, Inc. and Intelligent Automation Corporation strengthen Honeywell's global footprint and compound already significant capabilities in expeditionary logistics and condition-based maintenance. The expanded capabilities enable significant operational savings for Defense customers.

Honeywell is recognized as a defense industry standard for comprehensive, life-cycle management program deployment, six sigma processes, and performance-based programs. Through innovative global partnerships, in-depot and in-theater, Honeywell helps modern militaries stay mission ready for a changing battlespace.

“Meeting the evolving challenges facing modern defense organizations is a team effort”

Command, and Vice President
of Honeywell Mission Logistics**

“Meeting the evolving challenges facing modern defense organizations is a team effort” says General Johnnie Wilson, retired former Commander of the U.S. Army Materiel Command, and Vice President of Honeywell Mission Logistics. “Honeywell's stream of successful public/private partnerships is creating a new paradigm for how civilian companies, in service to nation, can extend our military's reach and effectiveness.”

Honeywell's Defense Logistics and Services operating tempo is tremendous. It proceeds from a systems and life cycle management perspective. It integrates and standardizes processes, uses advanced repair technologies, and defines success in pre-defined outcomes.

The goal is to double service life of mission-critical assets through Honeywell's Five Star deployment model which is based on five structural pillars. In a successfully integrated program, these five pillars compound value in support, readiness, operations, and cost.

Honeywell's Five Star Logistics and Services Support Model:

- OEM-quality parts
- Six Sigma LEAN processes
- Predictive maintenance technologies
- Standardization for supply chain efficiencies
- Personnel commitment to shared, common goals

Partnering with Honeywell provides an innovative path for extending service life and increasing availability for mission critical components. The company has many successful partnerships across defense service branches, platforms and depots. For over 20 years, Honeywell has served the U.S. Marine Corps to effectively manage more than \$3 billion dollars in mission-critical assets for the Maritime Prepositioning Ships. Honeywell is ready to meet the emerging requirements for MPF Future.

In other programs, Honeywell is helping the Air Force efficiently manage and service the B-2, C-130 and ground power equipment fleets at Ogden Air Logistics Center. It also supports the U.S. Army to produce durability and reliability improvements on critical systems such as the M1A1 Abrams tank, and the CH-47, UH-60 and AH-64 helicopters.

Learn more about how Honeywell's model for partnerships is extending service life for critical assets, reducing maintenance costs, and producing savings with improved asset availability and on-time, direct-to-destination deliveries.
